

About CharlesMRich.Net

Charles M. Rich is the owner of CharlesMRich.Net. He has been professionally developing software since graduating from UCF with a BSCS degree in 1987. At Siemens, he developed code used for setting up the databases for Digital Central Office telephone systems using C language and code running in the call processing computer using assembly language.

In recent years he has moved into developing ASP.NET software running on websites using Microsoft Visual Studio and the C# or VB.NET programming languages. The CharlesMRich.Com website had been set up as a business for developing custom websites, but many people do not need the time and expense of dealing with a truly custom website so CharlesMRich.Net was setup as an alternative.

The CharlesMRich.net website is a template for developing websites for many businesses or organizations. It uses a format which is easy for the public to follow. On the left are links to PDF documents and on the right are headlines and stories. The website owner can easily administer Categories and Links on the left and Headlines and Stories on the right. Charles will setup the webpage header, footer and background color which identifies your business or organization. He will also take care of registering your domain name and hosting your website. You can supply the content and update it yourself as often as you like. Your customers will love using a website where they can easily get the up to date information they are looking for.

If you have any questions, please send an e-mail to Charles@CharlesMRich.com.
